Summary

Computer Science student and AWS Certified Solutions Architect – Associate (Score: 896) with hands-on experience in backend and full-stack development, specializing in designing scalable, production-ready systems using Python. Proven ability to architect RESTful APIs, build modular and high-performance web applications, and translate complex business requirements into secure, resilient, and cost-optimized cloud solutions on AWS. Proficient in Python, Java, C/C++, SQL, Flask, and Django, with strong foundations in Data Structures, Algorithms, and System Design. Combines solid engineering fundamentals with practical cloud expertise to deliver reliable, maintainable, and user-centric systems, while continuously refining architectural thinking and problem-solving skills for real-world impact.

Education

B.Tech in Computer Science Engineering , Sharda University	CGPA: 8.8	2023 – 2027
AISSCE(Class XII) , CBSE	93%	2023

Technical Skills:

- **Programming Languages:** Java, Python, C, C++, JavaScript, SQL, HTML/CSS
- **Frameworks & Libraries:** Flask, Django, RESTful API Development, SQLAlchemy, Database Systems, Database Management
- **Databases & Storage:** MySQL, MongoDB, PostgreSQL
- **DevOps & Tools:** Git, Docker, Kubernetes, Jenkins, Linux, Git (Version Control), AWS, Virtualization, Cloud Computing, Computer Networks
- **Soft Skills:** Communication, Problem-solving, Adaptability, Teamwork, Critical thinking, Leadership

Achievements

- **LeetCode Achievement Badges:** 100 Days Badge (2025), 50 Days Badge (2025), May Badge (2025).
- **HackerRank:** Five Star rating in Python.
- **GitHub Achievement Badges:** Pull Shark (x2), Pair Extraordinaire, Quickdraw, YOLO.
- **GNOME Shell Extensions:** Author of “Always On Top” extension (active for GNOME Shell versions 45–47, 335+ downloads), officially accepted and published on GNOME Extensions Directory.
- **Amazon Web Services:** [AWS Academy Graduate - Cloud Architecting](#), [AWS Cloud Quest: Cloud Practitioner - Training Badge](#), [AWS Cloud Quest: Generative AI Practitioner - Training Badge](#), [AWS Cloud Quest: Solutions Architect - Training Badge](#)

Internship

Hack2skill — <i>Software Development Intern</i>	May 2025 – July 2025
Noida, Uttar Pradesh, India	

- Built a call desk management web app using Reflex (Python), with role-based authentication, RESTful APIs, and database integration.
- Leveraged SQLAlchemy ORM for scalable database operations and Pandas for data processing.
- Developed a responsive UI with real-time analytics and status tracking.

Projects

Linux Desktop Extension for Real-Time Window Management — <i>Shell, Javascript</i>	June 2025 - July 2025
---	-----------------------

- Developed a GNOME desktop extension that enables users to pin application windows on top using customizable keyboard shortcuts.
- Enhanced and modified an existing open-source extension (“On The Top”) by adding window management features and shortcut support for improved usability.
- Implemented core functionality using Shell scripting and JavaScript, with minor styling in CSS.
- Packaged and prepared the extension for submission to GNOME Extensions, adhering to open-source licensing (GPL v3.0).
- Focused on user experience and productivity by allowing quick toggling of window states without manual intervention.

FolioHub— Python, FastAPI, PostgreSQL, JavaScript

January 2026 - February 2026

- Designed and deployed a serverless portfolio API on AWS (Lambda, API Gateway, RDS, S3, CloudFront) enabling automated management and querying of candidate profile data.
- Implemented RESTful endpoints with FastAPI and SQLAlchemy for profile, project, and skill management with Pydantic validation and PostgreSQL persistence.
- Developed interactive frontend with dynamic filtering and data visualization, deployed via S3 static hosting with CloudFront CDN for HTTPS delivery.
- Optimized for serverless deployment with Mangum adapter, connection pooling, CORS configuration, and database migrations using Alembic.

CabConnect— Java, AWS Lambda, MySQL, HTML, CSS, JavaScript

February 2026

- Engineered a full-stack cab booking platform with a serverless Java backend on AWS Lambda to handle user onboarding, ride discovery, and booking workflows.
- Built modular backend architecture using DAO, Service, and Model layers, improving code maintainability, separation of concerns, and feature scalability.
- Developed REST-style booking and ride management APIs with persistent MySQL integration for users, rides, and reservations with reliable CRUD operations.
- Implemented a responsive frontend for end-to-end booking flows and integrated it with backend APIs for real-time ride and booking interactions.
- Automated packaging and deployment with Maven/build scripts for faster release cycles and cloud-ready delivery.

Open Source

Icesat2py - icepyx—Individual contributor

June 2025 - present

- Diagnosed and attempted to fix a bug preventing proper rendering of Harmony order details links in Jupyter Notebooks (#690).
- Improved HTML link generation logic by ensuring correct string formatting and handling trailing slashes in URLs.
- Collaborated with project maintainers through issue discussions and pull request feedback to clarify the root cause and optimal solution (transitioning job_id from a method to a property).
- Actively participated in code review and project communication, seeking feedback and learning about open source workflow tools (e.g., Binder).
- Provided clear explanations of proposed code changes and engaged in troubleshooting session with maintainers.

Viccsneto - music organizer—Individual contributor

June 2025

- Implemented a feature to automatically generate .m3u playlist files for each music genre detected in the library, enhancing user experience by enabling genre-specific listening.
- Developed the generate playlists function using TinyTag to scan directories, extract genre metadata, and create playlists in a consistent format (e.g., genre rock.m3u).
- Added a --generate playlists command-line argument to integrate the feature seamlessly into the main workflow.

GitJohnFis - Asteroids—Individual contributor

May 2025

- Enhanced codebase maintainability and developer onboarding by adding comprehensive, Google-style docstrings to all Python classes, methods, and functions.
- Improved documentation standards, ensuring every function and class has a clear summary, parameter/return descriptions, and notes on exceptions or side effects.
- Collaborated with the project owner on issue #3, following best practices for Python documentation and addressing “good first issue” needs.
- Upgraded the project README for better clarity and usage instructions.
- Facilitated open source collaboration through active participation in issue discussions, code reviews, and pull request workflows.
